TIMELESS QUALITY THROUGH PASSION

BOOST 110.0

Ultra-compact, fast and productive rider scrubber. It was designed to guarantee the manageability of a machine with an operator on foot, without giving up the power and convenience of a riding machine. This excellent size/performance relationship makes this machine the most highly recommended for cleaning midsize public or industrial areas. BOOST 110.0 conveniently passes through doors, between shelves and is easy to transport on vans or goods lifts.

BOOST 150.0

Very sturdy machine, designed for heavy-duty work in civil and industrial environments. It is characterised as a highly autonomous work instrument, both due to the duration of the batteries and the capacity of the tanks, also adapting to large sized areas. The motor power also allows it to work on ramps and surfaces inclined up to 10%. Boost 150.0 is also available in versions with disk brushes, for washing especially soiled surfaces, and with cylindrical brushes to wash and sweep in just one run.

BOOST 300.0

Rider scrubber for large areas, sturdy, with enlarged tanks and working autonomy beyond the standard. The technical solutions adopted for this machine make it ideal to be used even in heavy-duty conditions. Special care was taken in making it easy to service to guarantee economical operation and to avoid downtime during work. The Boost 300.0 is available in different cleaning widths, both with disc brushes and cylindrical brushes, in order to offer the most suitable solution for every requirement.

BOOST COMBI

Dulevo Boost Combi is combining the idea of sweeping and scrubbing at the same time. First of all the sweeping unit will pick up the debris and then the scrubbing unit will clean the floor. The design of the front located sweeping unit is based on the well known Dulevo sweeping and filtration technology to insure an effective sweeping result with full dust control. The heavy duty scrubbing deck, with three brush plates and constant floor pressure, ensures highest cleaning results even on heavily soiled surfaces.
